

Fertilysis Hysteroscopy & Uterine Antibiotic Wash program

An Effective Solution To Persistent Uterine Infections, Chronic Endometritis & Unexplained Infertility

 Fertilysis

Your Fertilysis Microbiome result may be telling us that you suffer from Chronic Endometritis.

Imbalances of the uterine microbiome which are detectable by the FERTILYSIS FEMALE MICROBIOME test, have been linked to Chronic Endometritis (CE), a condition that can cause implantation failure, recurrent pregnancy loss, and unexplained infertility

How does Diagnostic Hysteroscopy help in addressing a persistent abnormal uterine microbiome?

Diagnostic Hysteroscopy allows for direct visualization and assessment of the uterine cavity, helping to identify inflammation, infections, or structural abnormalities that may contribute to infertility. This is particularly important in cases of CE, a persistent condition that complicates management and leads to infertility.

Uterine Antibiotic Washes can effectively clear Chronic Endometritis, a common yet overlooked cause of infertility

Intrauterine antibiotic infusion treatment (IAI) (Uterine antibiotic Washes) provides a fast and highly effective approach to treating uterine infections.

Fertilysis Female Microbiome Testing

Combination of advanced diagnostic techniques with innovative treatment methods

Addressing infertility effectively

Increased clinical pregnancy rates

Diagnostic Hysteroscopy & Uterine Antibiotic Washes offer a comprehensive, new approach to managing infertility.

Why Hysteroscopy & Uterine Antibiotic Washes should be incorporated into your treatment protocol?

A highly effective approach for treating microbiome imbalances and chronic uterine inflammation

For recurrent implantation failure or pregnancy loss, this therapy improves effectiveness and clinical outcomes

Boosts conception chances and promotes healthier pregnancy outcomes

Combining uterine washes and oral antibiotics improves treatment success rates in cases of persistent inflammation

EXPERT CARE, NO GENERAL ANESTHESIA NEEDED

DIAGNOSTIC HYSTEROSCOPY IS PERFORMED BY OUR EXPERIENCED OB/GYN WITH ONLY ORAL PAINKILLERS OR TOPICAL ANESTHETIC AND NO GENERAL ANESTHESIA REQUIRED.

QUICK & SAFE PROCEDURE

TAKES UNDER 10 MINUTES WITH MILD DISCOMFORT FOR MOST, AND YOU CAN RESUME NORMAL ACTIVITIES IMMEDIATELY.

OPTIMAL TIMING

BEST DONE BETWEEN THE 7TH AND 9TH DAY OF YOUR CYCLE. MAKE SURE YOU'RE NOT PREGNANT BEFORE THE PROCEDURE.

VIDEO DOCUMENTATION

YOU'LL RECEIVE A VIDEO FILE OF THE PROCEDURE TO MONITOR PROGRESS OR SHARE FOR A SECOND OPINION.

ANTIBIOTIC WASH TREATMENT

BASED ON YOUR RESULTS, WE PROCEED WITH THE FIRST UTERINE ANTIBIOTIC WASH, FOLLOWED BY ADDITIONAL WASHES TO COMPLETE THE TREATMENT.
